Place of birth	**Ukraine**	Date of birth	**11/02/2000**

Languages

Italiano Native speaker

Ucraino Native speaker

Russo Highly proficient

Inglese Very good command

Employment History

Software Developer at GAB Tamagnini, Reggio Emilia

September 2018 — Present

I cover the role of full-stack developer and over the years I have developed several applications in various programming languages for different sectors and uses.

The main applications developed by me are:

- Ecommerce (PWA, Angular, .NET Core, Bootstrap 4)
- Warehouse management application for an important cooperative which uses the application on more than 500 PDAs in different points of sale (Android, Java)
- Inventory and deadline management application (Android, Kotlin)
- Application for interception of calls and redirect on Windows software for the management of take-away in restaurants and pizzerias (Android, Kotlin)
- Application taking orders for waiters more than 200 installations (Android, Java)
- Statistics dashboard (ASP.NET, Bootstrap 3, JavaScript, JQuery, MySQL)
- Several front-end interfaces for kiosks (JavaScript, JQuery, Bootstrap 3/4/5, Angular)
- Programs for importing data into MySQL from Excel or CSV (VB.NET)
- API (.NET Core, .NET Framework) that connected a different Windows software of the company with Cloud services developed by me.

During my career I have developed in the following programming languages:

VB.NET, C #, Java, Kotlin, JavaScript, TypeScript

Used the following frameworks:

Angular, JQuery, Bootstrap 3/4/5, .NET Core, .NET Framework, Ionic

Scraper Development for a Private

February 2021 — April 2021

I developed a scraper of the "Biodata" site for a private individual who maintains and manages a site that lists all the farms in Italy, since the Biodata site did not have any public APIs I have undertaken to create a Windows Console program in C# on which was going to extrapolate all the most important data about organic farms, the program was subsequently installed by me on a server and through a WEB service (API developed in .NET Core) made available the data to the end customer in the form of simple API calls to my server.

Education

Istituto Statale Superiore Silvio D'Arzo, Montecchio Emilia

September 2014 — June 2019

After the first school internship which took place in the third grade I remained to work in the GAB Tamagnini company, since the beginning of the internship I began to develop an important app for the company which is still used by many customers.

I was initially hired as part-time in my fifth year of high school and as soon as I finished high school the contract became a full-time one.

Skills

- Angular
- Android (Kotlin)
- .NET Framework
- VB.NET
- React
- jQuery
- Bootstrap 3/4/5
- Git
- Postman
- Illustrator
- Visual Studio
- Bitbucket
- Jira
- Android (Java)
- .NET Core
- C#
- Ionic
- JavaScript
- TypeScript
- HTML/CSS
- MySQL
- Photoshop
- Android Studio
- Visual Studio Code
- GitHub
